Lalola (first released as Lola in 1997) is a display typeface inspired by a lettering model found in the book *Schriftschreiben Schriftzeichnen* by Eugen Nerding and Lisa Beck. Lalola takes the few letters available from that model, as a starting point and becomes a single style typeface with strong character. Lalola looks great when some upper case and loud voice words are needed. It comes with all the necessary characters for the languages based on the Latin alphabet, which makes Lalola a versatile typeface. Now and thanks to the constant feedback and patience of Ilya Ruderman, Lalola is also available in Cyrillic (Russian, Bulgarian and Serbian). Welcome this brand new Lalola!

**Lorem ipsum is a pseudo-Latin text used in web design, typography, layout, and printing in place of English to emphasise design elements over content. It's also called placeholder (or filler) text. It's a convenient tool for mock-ups. It helps to outline the visual elements of a document or presentation, eg typography, font, or layout. Lorem ipsum is mostly a part of a Latin text by the classical author and philosopher Cicero. Its words and letters have been changed by addition or removal, so to deliberately render its content nonsensical; it's not genuine, correct, or comprehensible Latin anymore. While lorem ipsum's still resembles classical Latin,**

**Есть много вариантов лорем ипсум, но большинство из них имеет не всегда приемлемые модификации, например, юмористические вставки или слова, которые даже отдалённо не напоминают латынь. Если вам нужен лорем ипсум для серьёзного проекта, вы наверняка не хотите какой-нибудь шутки, скрытой в середине абзаца. Также все другие известные генераторы лорем ипсум используют один и тот же текст, который они просто повторяют, пока недостигнут нужный объём. Это делает предлагаемый здесь генератор единственным настоящим лорем ипсум генератором. Он**

Open Type formats allows to include an expanded character set and layout features, to provide advanced typographic control and better linguistic support such as ligatures, alternates characters and contextual substitutions. Open Type fonts work in all applications but only some take profit of the features.

OT supports Unicode which enables the fonts to contain more than 65,000 glyphs, while PostScript area limited to a maximum of only 256 characters. Open Type fonts work in all platforms and operative systems, having one single file for Mac and PC makes sharing files much more easier.
